In The Beginning: Compelling Evidence For Creation And The Flood (8th Edition)

Synopsis

In this expanded 8th edition, evidence that revolutionizes our understanding of origins is carefully explained. Part I discusses, in quick overview, 131 categories of evidence from biology, astronomy, earth science, and the physical sciences. Part II describes the hydroplate theory, developed during 35 years of study and research by Walt Brown. This theory explains a catastrophic event in Earth's history and solves a host of recognized problems. Some chapters in Part II deal with: the origin of the Grand Canyon, evidence that shows comets, asteroids, and meteoroids came from Earth. the sudden freezing and burial of the frozen mammoths, if there was a global flood, where the water came from and where it went, and how mountain ranges, volcanoes, submarine canyons, ocean trenches, and coal and oil deposits were formed. Thirty-seven other frequently asked questions fill a fascinating Part III of Brown's book. A few of those questions are: Is global warming occurring? If so, what causes it? Have scientific tools detected genetic traces of Adam and Eve within us? How accurate is radiocarbon dating? What about the dinosaurs? What hydroplate theory predictions have been confirmed? Is evolution compatible with the Bible?

Walt Brown received a PhD in mechanical engineering from Massachusetts Institute of Technology (MIT), where he was a National Science Foundation Fellow. He has taught college courses in physics, mathematics, and computer science. Brown is a retired Air Force full colonel, West Point graduate, and former Army Ranger and paratrooper. Assignments during his 21 years of military service included: Director of Benet Laboratories (a major research, development, and engineering facility), tenured associate professor at the US Air Force Academy, and Chief of Science and Technology Studies at the Air War College. For much of his life Walt Brown was an evolutionist, but after years of study, he became convinced of the scientific validity of creation and a global flood. Since retiring from the military, Brown has been the Director of the Center for Scientific Creation and has worked full time in research, writing, and teaching on origins. His biography is in "Christian Men of Science: Eleven Men Who Changed the World" by Mulfinger and Orozco.

Best Evidence for Young Earth Creation! Most of the creation science community still scratches their heads about the Great Flood and points to absurd vapor canopy theories and ascribes to the secular community's unworkable plate-tectonics ideas. Walt Brown blows holes in all the other theories and completely explained all the unanswered questions. After reading this book, you will wonder why anyone would believe anything else. If you want to increase your knowledge about the science of Origins, read this book. It is a good read for a lay reader with short informative sections and also for the hard core scientist with extensive references and detailed explanations (with enormous words and complicated-looking formulas and fancy charts and diagrams!)

This is probably the best science book that I have ever read, and Dr. Brown's evidence, hypotheses, explanations, descriptions, and validation in recent years' discoveries, make it the most sound and intriguing book in this field that I have ever perused. This book contains exponentially more solid analysis and thinking than I have seen in years. A standing ovation would not be enough to even begin to recognize this man's life work, which is as astonishing as that of Newton, Einstein, or Galileo, etc. This book should be standard reading in every high school and college. God bless Dr. Brown's intelligence!

There is a raft of detailed information explaining what the author calls the hydro-plate theory. He presents current theories next to his and explains why he believes hydro-plate theory explains geologic formations and the other theories fall short. The book is full of scientific details presented by experts. He makes me a believer. I already believed in creation but God does not explain How He did it or what happened during or after the flood. He did leave the details in His handy-work. This book goes a long way in explaining the details. I highly recommend it.

Excellent coordination of many disciplines. It is too bad that this book is not presented along side evolution in schools. It would help people think critically and help people to question the "absolutes" that they have been taught concerning cosmology, Earth history, and evolution.

While you can disagree with some conclusions, this is an excellent discussion of the Age of the Earth topics. Dr Brown displays excellent scientific discipline. I wish more folks in the debate would display his discipline, which enables dialog, even if none engages it.

If one is willing to consider facts as relevant to truth, then this exemplary scientific work of professional investigation is a landmark shift in understanding this planet's origins. Nothing else "out there" holds a candle to Walts work.

An interesting alternate look at what we were taught. Some of it makes sense, some of it is pushing good sense but it opens the mind to the restricted analysis of evolution/creation as we were told. There seems to always be an excuse, everytime someone finds the ark, to lose it or not get to it or not have much of any good proof. Where all the water came from to cover the entire earth 14,000 feet deep is a real stretch. Some of the analysis shoots down what we were taught. Interesting however as a study.

This is a book of answers that makes scientific sense. I have had questions about the logic of evolution compared to the Thermodynamic laws that control every energy transfer, and Information theory and this book resolved all of my questions. Opponents of this book attack it using emotional attacks, or lies. Watch the movie "Expelled" by Ben Stein. See what the evolutionists say when they're relaxed and giving honest reactions.
